Start earning SRP bill credits with BYOT

The SRP Bring Your Own Thermostat Program™ (BYOT) for Business lets you outfit your business with free* smart thermostats and put them to work for you. BYOT helps reduce the Valley’s peak energy demand, especially during summer. This is done through a few conservation events a year where your thermostat automatically adjusts a few degrees. When you join BYOT, you’ll receive a $50 bill credit for each smart thermostat you enroll. Plus, you’ll get another $25 credit per eligible thermostat at the end of each summer.

Enroll today or learn more about BYOT at srp.net(startsaving).

*After rebate and enrollment in the BYOT program. Preapproval required. Other restrictions apply. See full program details.

Is your HVAC equipment due for a tuneup?

Cool off with HVAC component upgrades, including high-efficiency motors and outside air economizers. You can also take advantage of maintenance incentives to help ensure optimal performance of your AC units. Maintenance activities include equipment checkups, coil cleanings, refrigerant charge adjustments and outside air economizer repairs.

Learn more at srp.net/hvac.
It’s time to adjust your watering schedule

As one of the Valley’s leading suppliers of water, SRP reminds you that as the temperature begins to fall, you’ll need to water your business’s landscaping less frequently. Make sure you water thoroughly and deeply at each watering. This way, roots are encouraged to grow deep into the soil where they’ll be better protected during the cold winter months.

On-peak hours change Nov. 1

If you are on the commercial SRP Time-of-Use Price Plan™ (TOU), winter TOU hours are in effect Nov. 1 to April 30:

- On-peak: 5–9 a.m., Monday through Friday
- Shoulder: 5–9 p.m., Monday through Friday
- Off-peak: All other hours, including weekends

To learn more or sign up for the TOU price plan, visit srp.net/bizpriceplans or reach out to your dedicated Energy Manager (contact information located at the top left corner of your bill).

Winter prices begin

Winter prices begin with the November billing cycle. Your November bill will reflect winter pricing schedules, which are effective through the April billing cycle. The price you pay for electricity rises and falls with the seasonal demand for energy.

Price increase to take effect in November

This November’s billing cycle will reflect a 9.6% overall price increase through the Fuel and Purchased Power Adjustment Mechanism (FPPAM) approved by the SRP Board in March 2023. For more information, visit srp.net/fppam.
