

### **Maintaining painted equipment:**

If SRP replaces pad-mounted equipment that a customer has painted, the new replacement equipment will be standard SRP colors. The customer may paint the replacement equipment, observing the guidelines.

SRP retains the right to charge you the full cost of restoring the equipment to its original condition if you:

- Do not comply with SRP requirements.
- Do not maintain the chosen color scheme.

Thank you for your cooperation.

# PAINTING SRP PAD-MOUNTED EQUIPMENT

---

## Guidelines for enhancing area aesthetics

Delivering more than power.™

## You may enhance area aesthetics if you follow certain guidelines.

At SRP, our goal is to provide you with reliable power. We also work within our communities to offer facilities that have a low visual impact on neighborhoods, such as pad-mounted transformers and other equipment.

To help these facilities blend in with the surrounding community, we offer customers the option of painting certain pad-mounted equipment. Using your own resources, you may do so while following certain guidelines that help us ensure the continued reliable operation of this equipment for the benefit of you and other electric service customers.

Customers may paint pad-mounted transformers, switching and fusing cubicles, and capacitor enclosures, as shown in the photo below.

Substation walls and other SRP equipment are not eligible for this program. For your safety and the safety of others, we want to prevent non-SRP individuals from interacting with or near high-voltage equipment.

### Before painting, please observe these rules:

- Contact your homeowners association or municipality for color schemes to be used and approval to proceed.
- Color choices should complement the surrounding area near the equipment being painted.
- SRP recommends using a water-based paint that will not damage the original surface.
- Avoid using films or laminates for paint.

### To prepare the area to paint, please:

- Clean the surface using a mild detergent and water.
- Avoid sanding or power washing.
- Avoid using chemical solvents.
- Mask or cover the concrete pad, adjacent equipment and surrounding objects.

*Do not paint over stenciled information or reflective stickers on instructional and warning decals (see circled examples above).*

### When painting, leave the following parts of SRP equipment untouched, as shown in the photo above:

- Identifying lettering and numbering
- Warning signs
- Handles
- Locks
- Pads
- Sight glass windows

We ask that you maintain the condition of the equipment you have painted. That means repainting the preferred color you have chosen periodically for upkeep during the lifecycle of the equipment.
