TUNE UP YOUR SMALL BUSINESS HVAC

Deliver ng water and power®

SRP HVAC Tune-Up is an innovative rebate program that uses cost-effective strategies to help make existing HVAC packages or split systems more efficient. This program is designed to optimize facility operations and improve occupant comfort. A tuneup can help identify the best and most affordable improvements for your system.

SRP Business Solutions™ offers programs and rebates that help keep your business energy costs as low as possible, including incentives that can offset the cost of HVAC system improvements. An approved SRP HVAC Tune-Up contractor will examine how your equipment operates and optimize your system by:

- Cleaning condenser coils
- Completing a system evaluation
- Ensuring system safety and operability
- Calibrating and programming your thermostat
- Smart thermostat upgrades

Benefits

Many HVAC issues are a result of easily fixed problems, such as poor indoor air quality, improperly programmed controls or dirty/clogged air filters. Regular maintenance can catch small issues before they escalate into costly repairs.

Regular maintenance can:

- Enhance the comfort and safety for occupants
- Reduce future repair costs
- Save money on energy costs
- Extend the life of your HVAC system

Eligibility

Small business customers automatically qualify for the SRP HVAC Tune-Up program.
To qualify for the SRP HVAC Tune-Up program, your facility must be at least 2 years old, have a minimum system capacity of 2 tons and may not be under a current HVAC maintenance agreement. You will be required to work with an approved SRP HVAC Tune-Up network contractor.
