NOTES

1. These guidelines are provided as a general aid to planning. Actual SRP requirements may vary based on site-specific conditions, operational considerations, etc.

2. An SRP license is required for utilities crossing/parallel to SRP irrigation pipe in SRP right-of-way. SRP requires engineer-designed utility crossing/location and excavation plan.

3. SRP may license limited uses of its right-of-way such as parking, sidewalk, lawn, etc. Poles, structures, and trees are typically not permitted in SRP right-of-way, unless design drawings for proposed use when submitting request to SRP for license.

4. Utilities parallel to SRP irrigation pipe are reviewed on a case-by-case basis. Locate parallel utility outside of area SRP excavates when maintaining irrigation pipe, or 4'-0" beyond the side of the outside bell diameter of the SRP irrigation pipe, whichever is greater. Typical excavation includes area above and to each side of SRP irrigation pipe. Side excavation includes area above a line extending upward and outward at a one-to-one slope from a point level with the bottom of and 4'-0" beyond the side of the outside bell diameter of the SRP irrigation pipe.

5. Other utilities are not permitted in these areas.
